PROJECT ABSTRACT SUBMISSION

COURSE: CLOUD BASED DATA ANALYTICS SPECIALITY (23SDCS08R) A.Y. 2025 - 2026

Title of The Project	AUTOMATED DATA PIPELINE HEALTH MONITORING SYSTEM	
S. No.	**University ID**	**Name**
1	2320030332	UPPALAPATI VIVEK
2	2320030279	NANDIGONDA AKHIL
3	2320030005	VAISHNAVI PONNURU

ABSTRACT

In modern cloud-based systems, automated data pipelines are essential for processing and delivering large volumes of data for analytics and decision-making. However, issues such as data delays, missing records, and pipeline failures can negatively affect business operations if not detected early. The Automated Data Pipeline Health Monitoring System provides a cloud-based solution to continuously monitor the health and performance of data pipelines in real time. The system tracks important metrics such as pipeline execution status, data freshness, and error rates, and performs automated checks to ensure data accuracy and completeness. When any failure or abnormal behavior is detected, alerts are sent through email or notifications for quick resolution. By using centralized monitoring and dashboards, the system improves visibility, reduces downtime, and increases data reliability, making it suitable for real-world cloud analytics environments.
